

High Energy INDUCTION KITS

High Energy Inductions (HEI) have been developed in conjunction with automotive engineers and well renowned performance specialists, to ensure both quality and optimum performance. High Energy have also included a K&N Pod Filter with every HEI Kit to make sure that we provide our customers with the best.

High Energy HEAT PROTECTION

Excessive Engine Bay Heat can not only cost you precious horsepower, it can destroy hoses, cables, and wiring. High Energy has designed a range of Heat Protection Products to help contain excessive heat.

High Energy GILMER PULLEYS

High Energy Gilmer Pulley Kits are designed by an engineer and are CNC Machined from 6061-T6 Billet Aluminium to ensure that they are best possible quality and have no issues with overheating. Please note that our Gates Gilmer Belts are sold separately.

High Energy LOWERING BLOCKS

High Energy Lowering Block Kits are made right here in Australia. They come with everything that you will need, lowering blocks, u bolts, washers and lock nuts. They are available in 1 1/2" and 2" to suit a range of different vehicles.

High Energy OIL PANS

SUPER PAN

The High Energy Super Pan is our most popular oil pan. It is great for all street cars with little or no modifications, right through to your 600hp street, or 10 second strip car. The Super Pan is high capacity keeping the oil cooler, and also features a windage tray and crank scraper for maximum performance.

You can use the original engine oil pick up, or team it up with a High Energy Pick Up for optimum performance.

RACE PAN

The High Energy Race Pan is built for circuit, drag, drift and speedway cars. It handles stopping, starting and cornering like a demon. The Race Oil Pan is high capacity and has a trap door oil baffle system that keeps the oil where you need it. It is also teamed up with a race pick up for optimum performance.

IGNITION LEADS

Performance engines place huge demands on the electrical system of your car. That is why High Energy have developed a range of Premium Ignition Leads to deliver the best spark possible to your engine.

We have sourced the best possible components, with two things in mind, performance and quality. We use only stainless steel terminals (except on Holden LS series engines) and a low resistance stainless steel wound ferrite inner core with only 305 ohms of resistance per foot. The cable conforms to ISO 3808, and is rated to a peak operating temperature of 260°C.

High Energy leads are manufactured in Australia using local and imported components. High Energy also provide a 2 Year, 50,000km Conditional Manufacturer's Warranty with each set of Ignition Leads.

High Energy Ignition Leads are only available for V8's and are only available in Black. They come in 9mm and 10mm sizes to cater for most needs. If we do not have the exact set that you need, you can always choose a Universal Ignition Lead Set, so that you can get them just perfect for your engine.
